

Call Bell System

Wireless Call Bell System is a reliable and easy-to-use wireless calling solution designed for hospitals, offices, factories, warehouses, hotels, service centers, and industrial environments where instant communication is essential. Using secure RF wireless technology, the system allows personnel to send calls without the need for additional wiring, ensuring quick installation and dependable operation.

Key Features

- **Wireless RF Communication**
Long-range RF-based communication for reliable signal transmission.
No additional communication wiring required.
- **Three-Button Remote Control**
C Button (Green): Sends a normal call request.
Middle Button: Sends an emergency call for urgent assistance.
X Button (Red): Resets or clears the active call from the remote.
- **Memory Retention**
Built-in non-volatile memory stores the last active call.
If power is interrupted, the system automatically restores the previous call status when power returns, ensuring no active call is missed.
- **Panel Reset Switch**
A dedicated reset button on the receiver panel allows operators to clear active calls directly from the control unit.
- **Adjustable Volume Control**
Side-mounted volume control enables easy adjustment of the buzzer sound to suit different environments.
- **LED Status Indication**
Individual high-visibility LEDs indicate the calling unit that has sent a request.
Active calls remain illuminated until they are reset.
- **Instant Audio & Visual Alerts**
Audible buzzer immediately notifies staff when a call is received.
